

Paqualab Incubator 25:- Single Incubator Filtration Unit 25 Al Petri Dishes

Code: 420-030

Product Group: Paqualab Portable Incubators & Filtration Unit

Contamination by sewage is the greatest danger associated with water for drinking.

This is because sewage may contain organisms that cause diseases such as typhoid, dysentery and hepatitis.

The bacteria which cause the disease are very small and cannot be seen without a microscope. The

Most common method of counting bacteria is to encourage them to grow to form a colony of bacteria large enough to be seen and counted. It would be very dangerous for the operator if the disease causing organisms were grown, therefore harmless indicator bacteria are used. Indicator organisms are much more common than disease causing organisms and so are easier to detect. The presence of coliforms, faecal coliforms and faecal streptococci are used to establish whether a water supply has been contaminated with sewage.

The ELE Paqualab 25 includes a Universal Incubator of which 25 Tests of Faecal & Total coliforms in one incubation period complete with two pre-set temperatures (normally 37 °C and 44°C) a membrane filtration unit, microbiological accessories kit, connecting cables and operating manual. All components are housed in a convenient rigid carrying case which can also accommodate a number of electronic meters from the ELE Paqualab range. The system will operate on 12V or 24V DC, 110V or 240V AC, or the internal 12V or 24V DC, 110V or 240V AC, or the internal 12V rechargeable battery supplied. The ELE Paqualab 25 includes a universal incubator with 2 pre-set temperatures (normally 37°C and 44°C), a membrane filtration kit, connecting cables and operating manual. All components are housed in a convenient rigid carrying case which can also accommodate a number of electronic meters from the ELE Paqualab range.

Spares/Consumables

Filtration Unit AI Construction Complete with Sampling Cup.
