

Moisture Condition Value (MVC) Apparatus

Code: [SPLSL070](#)

Product Group: [N/A](#)

- The Moisture Condition Valve is used for Moisture Condition Value tests and Chalk Crushing Value tests.

- It is easy to use due to its' simple design. When the sliding hammer is lifted to the correct pre-determined height, it triggers a release mechanism which allows the hammer to fall into the mould and this compacts the sample.

- The apparatus has a trip-counter which records the number of hammer blows.

- The apparatus comes with a mould, fibre discs and a vernier depth gauge for penetration measurement.
