

Insulated Earth Thermometer 200mm

Code: [504-042](#)

Product Group: [Temperature measurement](#)

The insulated pattern thermometer is left in the soil, with the added advantage that readings can be taken in-situ without disturbing the instrument. The lower portion is placed vertically in the earth with the bulb at the required depth, and the insulated thermometer stem and opal scale are supported on a black-enamelled mild steel angle bracket. The range is -10°C to $+55^{\circ}\text{C}$ divided into 2.0°C intervals

Further Information

For use up to 200 mm depth.
